

## Algebra 2 Ch. 12 Review

**T12-1: I can solve for missing sides and angles in right triangles using right triangle trigonometry (SOHCAHTOA).***Round answers to the nearest hundredth.*

1. Find all 3 of the values of the trigonometric functions for  $\theta$ .

In a right triangle  $\angle B$  is acute. Find all of the remaining trigonometric functions given the following.

2.  $\tan B = 2$
3.  $\sin B = \frac{8}{15}$

4. Solve the triangle for all missing measurements.

5. Solve the triangle for all missing measurements.

6. Solve the triangle for all missing measurements.

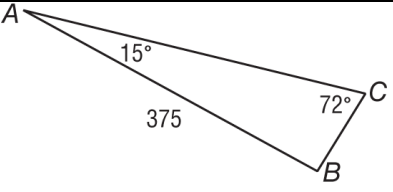

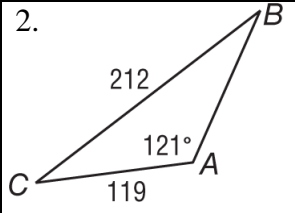

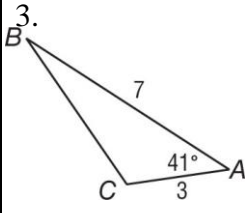

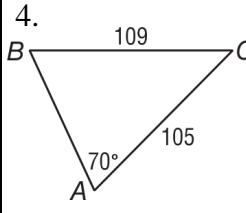

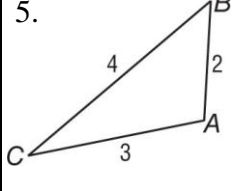

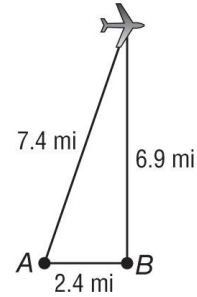

7. **SURVEYING** John stands 150 meters from a water tower and sights the top at an angle of elevation of  $36^\circ$ . If John's eyes are 2 meters above the ground, how tall is the tower? Round to the nearest meter.

**T12-2: I can solve for missing sides and angles in triangles using Law of Cosines and Law of Sines.**

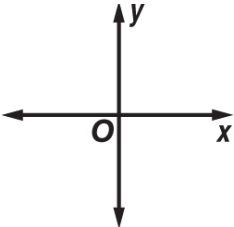

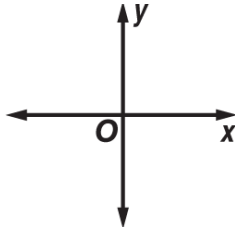

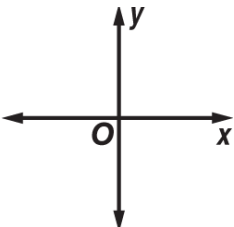

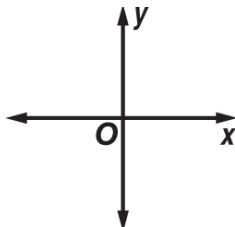

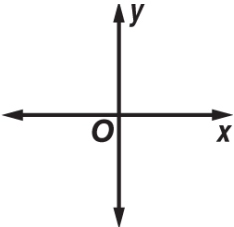

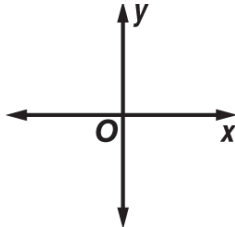

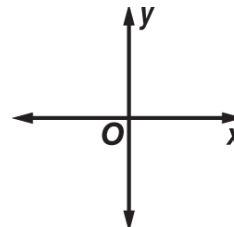

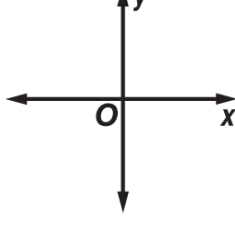

Find all the missing parts of each triangle using appropriate methods. Show your work and label the final answer on each triangle.

The straight-line distance between Station B and the plane is 6.9 miles. What is the angle of elevation from Station A to the plane? Round to the nearest degree.</p> 

**T12-3: I can draw and find angles in standard position and convert between degrees and radian measures.**

For all problems draw each angle in standard position. Convert each angle to either degrees or radians. Find a positive and negative angle that is co terminal to the given and find the reference angle.

**T12-4: I can find values of trigonometric functions of general angles.**

For problems 1-8, find the exact values of the six trigonometric functions at  $\theta$  that contain the given points.
